

Fullstack Developer (automobile manufacture project)

T-Systems RUS

Код вакансии:	104048
Страна:	Россия
Местоположение:	Saint Petersburg
Регион:	St. Petersburg
Выберите тип занятости:	Полная занятость - постоянный контракт
Job Level:	Профессионал
Требуемые языки:	Английский
Требуемый опыт работы:	1-3 года

Описание работы

The main goal of the the project is preparing training data for supervised learning algorithms for autonomous driving. Data is collected by several types of car sensors (video cameras, lidars, etc.) during test driving sessions. The application provides Web-UI based interface for visualizing synchronized sensors data with ability to create labels of world objects like other cars, traffic lights, lanes, etc. Project is being developed very rapidly in an agile mode.

The main responsibility of developer would be:

- implementation of new front-end features according to the user stories.

Other activities would be:

- implementation of the back-end (JEE) tasks and participation on the BigData parts of the project.
